

Introducing our Citysuckers... even smarter vacuum excavation

High performance vacuum suction, on a smaller scale

Our Citysucker vacuum excavation units provide high performance in a compact, urban friendly design. Their compact size makes them ideal for sites with limited or restricted access where larger excavation units may have difficulty manoeuvring.

The high performance fans provide air flow volume of up to 32,000m³ to ensure minimum disruption to the local area, people and the environment.

Standard features

- High capacity filter system
- Automatic pulse jet filter cleaning system
- Separation of material before filters
- 7 bar, 140 cfm rotary compressor for tooling
- 2m³ rear tipping spoil capacity
- Full hydraulic tipping and telescopic boom
- Tip to ground or into bags for easy clearing
- Boom swivels through 180°, extending to 2.8m
- Single Fan 250mm hose, Twin Fan 200mm

Equipment Detail

Equipment mounted to 12 or 16 tonne chassis:

Length	6,200 mm
Width	2,300 mm
Height	3,190 mm
Wheelbase	3,600 mm
Tipping Height	1,320 mm
Gross Weight	12,000 or 16,000 kg
Un-Laden Weight	9,200 kg
Twin Fan System
