

The UK industry leader in Vacuum Excavation

**Smarter excavation solutions,  
with proven on-site safety benefits**

## “Vacuum Excavation”

*Reference: Wikipedia*

Vacuum excavation is excavating by high-powered vacuum suction machines. This process significantly reduces the risk of loss of property and injury to workers associated with contacting or cutting underground utilities.

**Discover more about vacuum excavation at [www.pier-uk.co.uk](http://www.pier-uk.co.uk)**

## What makes us the largest vacuum excavation operator in the UK?

We started to provide vacuum excavation in January 2009, having already established extensive drainage services to construction companies back in 2001. Recognising the huge benefits of vacuum excavation over more traditional methods, Pier (UK) ceased providing standard drainage services in 2012 to fully develop vacuum excavation in the UK marketplace. With continuous promotion and education over different sectors and large fleet investment, we became the UK market leader in 2015.

In fact from summer 2015 to date, our continued investment of £5.6 Million over a 2.5 year period now firmly places us as the largest vacuum excavation operator in Europe.

## Unrivalled service, nationwide.

We work alongside utility, civil engineering and construction companies of all sizes, on public and private sector projects – supporting planning maintenance and improvements, assisting with emergency repairs or working with other contractors to deliver large development projects.

We liaise with our customers to understand their individual site requirements and provide the best solution, identifying all works that can be achieved faster and safer using vacuum excavation.

## Operated or self-operated? You'll be fully supported either way.

Whether you're looking to hire a short-term operated vehicle, or want to train your operatives to self-operate equipment for a longer project, we'll provide a broad range of training and support. You can be sure we'll pass on the best working practices for any application.

Think vacuum excavation could benefit your groundworks? You can trust Pier

## Around the clock technical support.

We understand that when you're on-site working to deliver engineering works to your customers you need to know that help is at hand if you hit any snags.

That's why our vacuum excavation fleet is supported by a dedicated **24/7 in-house maintenance team**, for technical support. Fully mobile and with GPS fitted to give arrival times, you can be sure you'll get a fast response to ensure your project keeps running on time.

## Training and Best Practice.

Our operators have a range of certifications to ensure best practice on sites. After completing extensive equipment training and coaching, each operator achieves a minimum of CSCS certification, followed by EUSR SHEA, EUSR Water, Highways England, North West Gas Alliance, Wales and West Gas Alliance, TRIIO, Confined Space, BESEC, Safety Critical Medical, SPA Petro Chemical Forecourt, Street works, and PTS to name a few. As part of our commitment to on-site health and safety, our vacuum excavation solutions also incorporate any additional training regulations and initiatives individual sites may have.

## Accreditations.

As we continue to grow and extend our client base we also continue to undertake new accreditations to ensure full capabilities across your contracts.

### Some of our accreditations include:

Constructionline, Achilles UVDB, Achilles Buildingconfidence, SMAS, CHAS, Safe Contractor Plus, Exor, CPA, RHA, & FORS.

## A range of hire vehicles available:

	Width	Length	Height
32 tonne	2.5 metres	10.1 metres	4.1 metres
26 tonne	2.5 metres	9.7 metres	3.8 metres
<b>Citysuckers</b>			
12 & 16 tonne	2.3 metres	6.2 metres	3.2 metres

er (UK) for the best solution
